

## NETWORK CATEGORIES

The computer networks are classified based on two factors

- (i) Transmission Technology
- (ii) Scale(Size of the Network)

## Classification of Computer Networks by scale.

Interprocessor distance	Processors located in same	Example
1 m	Square meter	Personal area network
10 m	Room	Local area network
100 m	Building	
1 km	Campus	
10 km	City	Metropolitan area network
100 km	Country	Wide area network
1000 km	Continent	
10,000 km	Planet	The Internet

## Personal Area Network

Bluetooth PAN configuration

# LAN ( Local Area Network)

- Privately owned and links the devices in a single office, building or campus
- LANs designed to allow resources to be shared between PCs or workstations. The resources may be H.W (e.g. printer) or S.W (applications program) or data.
- In LANs one of the computers has a large capacity drive and becomes a server to other clients.

## Contd..

- S/W stored on server and used as needed by the whole group.
- LAN size determined by licensing restrictions (no of users per copy of S/W)
- LAN use only one type of transmission medium.
- The most common LAN topologies are bus, ring and star.
- Traditionally LAN have data rates in the 4 to 16 Mbps. Today Speed can reach to 100Mbps or 1000Mbps(1G).

# Local Area Networks

Wireless and wired LANs. (a) 802.11. (b) Switched Ethernet.

Vasireddy Venkatadri Institute of Technology, Nambur

## Single-Building LAN

Used in business environments, links a workgroup of task-related computer.

a. Single-building LAN

Vasireddy Venkatadri Institute of Technology, Nambur

## Multiple-building LAN

b. Multiple-building LAN

# MAN (Metropolitan Area Network)

- Owned by private company or it may be a service provided by public company ( such as local tel.-company)
- Extended over an entire city.
- May be single network such as a cable television network, or it may be connected number of LANs into a large network so that resources may be shared LAN-TO- LAN.

## Metropolitan Area Networks

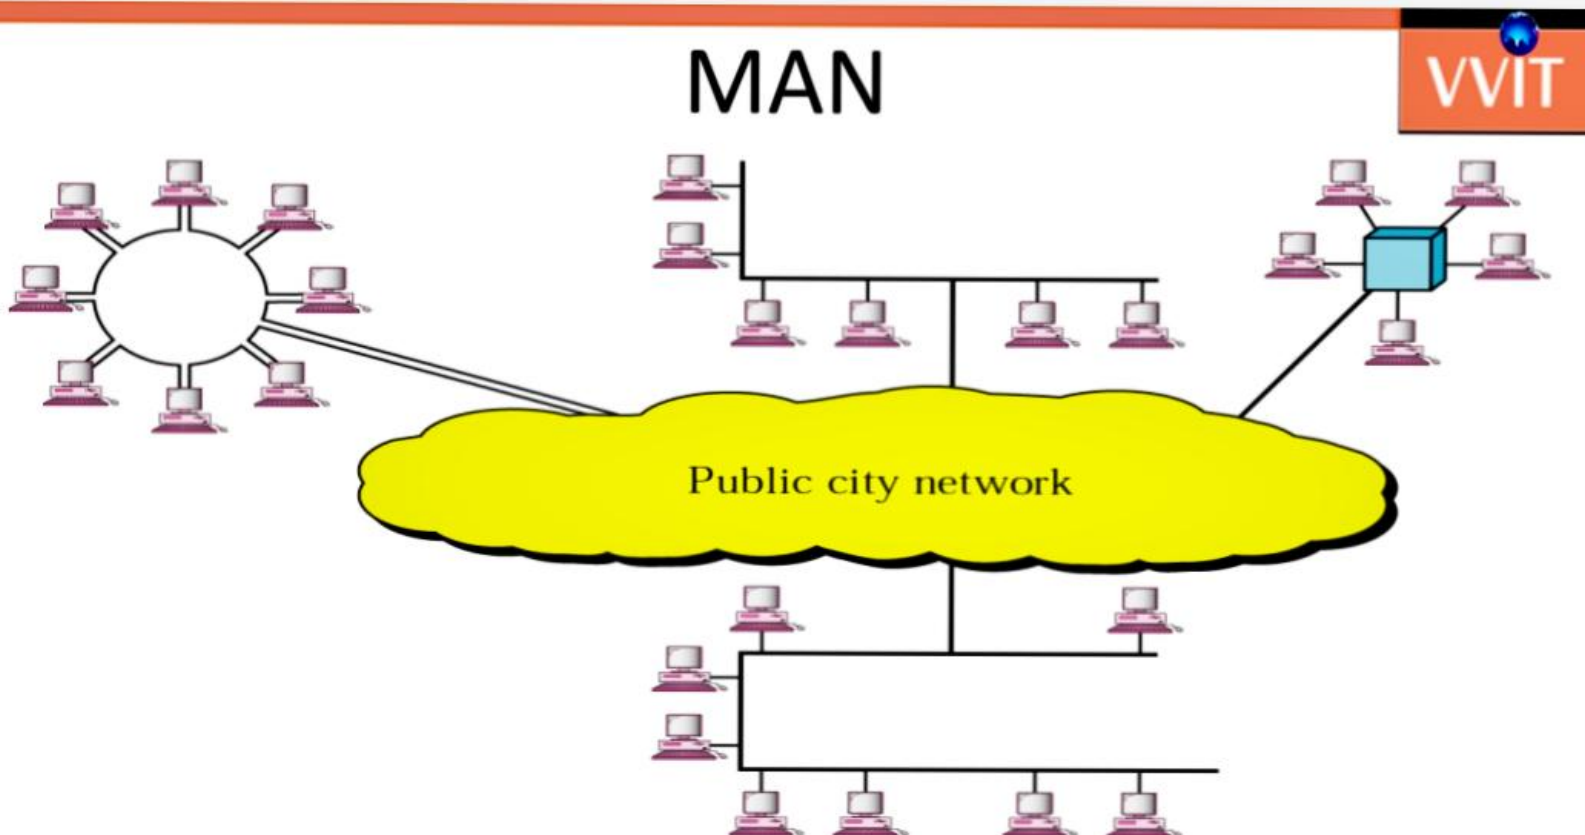

A metropolitan area network based on cable TV.

# MAN (Metropolitan Area Network)

- Examples:**

- ✓ Company can use MAN to connect the LANs in all its offices throughout the city.
- ✓ A part of the telephone line network that can provide DSL line to the customer

# MAN

Vasireddy Venkatadri Institute of Technology, Nambur

# WAN (Wide Area Network)

- Provides long distance transmission of data, voice , image and video information over large areas ( country or whole world)
- In contrast to LAN, WAN may utilize public or private communication equipments or combination.
